```python
#odd or even numbers( no + after the variable instead use comma ,)

num = int(input('Enter a number:'))

if num%2 == 0:
    print(num, 'is a even number')
else:
    print(num,  'is a odd number')

value = int(input('Input a number:'))

if value<10:
    print(value, 'is less than 10')
else:
    print(value, 'is greater than 10')
```
