

```
#this code will change the text inside the file, and
# with the function of "w" it change write anything you want and
# when run, it will appear.

sample_file = open("C:/Users/Krisha Hermosilla/Desktop/PYTHON/sample.txt", "w")
sample_file.write('Hello World!')

#you can also create new file by changing the file in the directory
#after, name file will be created in you folder/ directory.

sample_file = open("C:/Users/Krisha Hermosilla/Desktop/PYTHON/hello.txt", "w")
sample_file.write('Hello World!')

#example: hello
```
